1. Welcome and Apologies

The Chair welcomed everyone to the meeting

A special exhibition was presented by Boston Dynamics of Spot the robotic dog. Spot is a robot that is used by the nuclear industry in the UK and globally. It takes people away from hazardous areas. This particular robot has a manipulator arm that is able to pull, grab and grasp objects as well as deploy instruments. He also noted how it can walk up and down stairs and avoid collision which shows its stability.

The Chair thanked the team for introducing Spot to the meeting.

The following apologies were noted:

John Madden
Katie Chandler
Steve Murray
Bill Hamilton
Andrew McAteer
Cllr Gwynfor Owen
Glyn Davies - Diffwys and Maenofferen Ward

3400 days without a lost time injury; safety remains the top priority.

People Onsite

Over 300 staff on site, with 92% locally based. Apprenticeship and early career activity continues to grow.

Targets and Milestones

Most key targets are on track; relocation of the Site Security Control Room slightly delayed but expected completion by March 2026.

STEM and Skills

Increased engagement with schools, expansion of work experience opportunities, and collaboration with universities.

Waste Processing

Programme nearing completion with the majority of radioactive waste processed; final completion expected by March 2026.

Reactor Height Reduction

Approved £70m project progressing; visible changes anticipated from summer 2026 with significant temporary workforce increase.

Ponds Deplant

Assets and Operations

Ongoing infrastructure improvements and use of robotics (Spot) to enhance safety and efficiency.

Community and Socio-economic

Increased engagement activity and continued local investment through community and economic programmes.

The Chair thanked TW for his report

Question and Answer Session

Q1: Cllr D.M.Williams - When will graphite removal from the reactors take place?

A1: TW confirmed that removal remains part of the plan. However, due to ongoing strategic reviews, the timeline may change, with the earliest estimate currently around 2040.

Q2: HK - Are there opportunities to engage more closely with apprentices?

A2: TW confirmed that this would be supported, with further discussions to take place.

Q3: GP - Feedback on community contribution. Positive feedback was provided recognising the site's strong contribution to local employment, skills development, and opportunities for young people.

The Chair apologised on behalf of Katie Chandler and moved to the next item.

Item 7 – Report by Iwan Williams Natural Resources Wales / Environment Agency

Iwan Williams was welcomed by the Chair.

IW noted that there were no significant updates to report during this period.

It was reiterated that the environmental permit variation application has been retracted. Communication has been ongoing with NRS to support a future resubmission.

Another application by the NRS is currently being considered, which is to reuse concrete from the reactors. This license has been considered and a decision will be made over the next months.

Question and Answer Session

Q1: A member asked how the concrete would be used onsite.

A1: IW answered that it would be used to ensure a level site to the west of the current site.

The Chair thanked IW for his update.

Item 8 – Report by the Nuclear Decommissioning Authority

The Chair apologised on their behalf for their absence and therefore moved on to next item.

Item 9 – Welcome and Introduction - Costain

James Trott provided an update on mobilisation for the reactor height reduction project.

The programme will reduce structures from c.55m to 29m through phased deplanting, decontamination and controlled dismantling using cranes.

Enabling works are underway, with multiple subcontractors engaged and opportunities for local supply chain involvement.

The project will be delivered collaboratively, with a focus on safe, sustainable decommissioning and recognising the site's heritage.

Commitments to social value include developing skills and apprenticeships, supporting local employment, engaging with schools, and enabling business growth.

Item 10 – AOB

Word on behalf of Liz Saville-Roberts

An apology was given on behalf of Liz Saville-Roberts. It was noted that she and Llinos Medi will meet with Patrick Valence, the Nuclear Minister, in early January.

Egino

EW noted that the closure of Cwmni Egino was not their decision and expressed disappointment, while recognising the team's achievements and positive impact.

Ongoing work has included developing future opportunities, such as a proposed innovation centre with Cyngor Gwynedd.

The importance of continued investment in the area was emphasised to support economic activity and retain local people, alongside recognition of NRS's contribution.

Work has also supported the AI Growth Zone bid to include Trawsfynydd.

EW expressed hope that momentum will continue and confirmed willingness to provide ongoing support and share knowledge.

The Chair thanked EW and the team for everything they've done.

The Chair invited D.M. Williams to speak, who outlined strong concerns regarding the closure of Cwmni Egino, highlighting its importance to local jobs, economic growth, and collaboration.

He proposed drafting a collective letter to relevant bodies to advocate for retaining key staff, noting broad support from members.

**REPORT TO THE SITE STAKEHOLDER GROUP
JUNE 2026**

FOREWORD

This report is issued to the Site Stakeholder Group (SSG) to provide a brief summary of the regulatory activities of Natural Resources Wales (NRW) relating to the Trawsfynydd Decommissioning nuclear site.

NRW is accountable to the Welsh Government for the environmental regulation of nuclear sites in Wales. NRW has a contractual arrangement in place which enables them to draw on the experience and resources of the Environment Agency's specialist Nuclear Regulation Group, to assist in the delivery of on-site inspection work and associated assessments.

We regulate the disposal of radioactive waste, discharges to water and conventional waste. Please see Annex 1 for further information on our role.

Introduction

This report covers the period from October 2025 to May 2026.

Inspections

There were no inspections conducted during this period

Discharges

All regulated discharges, including the radioactive discharges to air and water from Trawsfynydd were within permitted limits during this reporting period

Environmental monitoring

The environmental monitoring programme has progressed throughout the quarter. There is a minor issue related to the data submitted for lake sediment sampling is currently being investigated

Permitting

During this period, we have initiated discussion with NRS Ltd on working towards the re-submission of an application for on-site disposals of radioactive waste.

NRS Ltd have also applied for a Disposal for Recovery of Waste to Natural Resources Wales which is currently in determination. This is an application to re-use the clean demolition waste from the proposed height reduction work and re use on site for a lay down area to support future decommissioning activities.

Events and enforcement

There were no events of note during this period. We are currently investigating historic lake sediment monitoring data issues which is noted above in the environmental monitoring section.

Annex 1: The role of Natural Resources Wales and the Environment Agency at nuclear sites

Operating and cleaning up nuclear sites generates radioactive and non-radioactive wastes. Our role as the environmental regulator is to ensure that the impact of those wastes on people and the environment, now and in the future, is as small as it can be. We also aim to prevent pollution, enhance the environment, and contribute to the sustainable development of the UK.

We inspect nuclear sites and assess proposals from operators, to provide assurance that the operator is complying with the limits and conditions of the permits we issue under the Environmental Permitting Regulations 2016 (as amended) and other relevant legislation and policy.

We supplement direct regulation with a partnership approach, working with the operators, the Nuclear Decommissioning Authority (NDA), and the Office for Nuclear Regulation (ONR) to solve problems jointly.

We expect operators to comply fully with all relevant legislative requirements and permits. If this does not happen, we will not hesitate to use our enforcement powers to ensure that action is taken to protect the environment or to secure compliance.

In summary our objectives are to:

- Ensure that environmental permits are up to date, flexible and fit for purpose and that they drive environmental improvement
- Assess compliance with the limits and conditions of the permits
- Reduce risks to the environment and avoid creating further legacies
- Ensure that integrated waste strategies continue to improve
- Ensure that solid waste is packaged in a form suitable for disposal
- Ensure that infrastructure and assets are maintained to minimise environmental impact
- Develop guidance on Best Available Techniques (BAT)
- Influence NDA so that they provide appropriate direction to operators to minimise waste and improve environmental outcomes
- Encourage integrated management of fuel and nuclear materials so as to prevent or minimise the potential environmental impacts
- Ensure land and groundwater contaminated by radioactivity or other pollutants is managed appropriately and protect land and groundwater from further contamination
- Monitor and assess organisational change to ensure that environmental performance is maintained

Natural Resources Wales and the Environment Agency have produced joint guidance on our requirements for decommissioning of nuclear sites, which can be found here: <https://www.gov.uk/government/publications/the-decommissioning-of-nuclear-facilities> waste.

1. Inspections

1.1. Date(s) of inspection

Our site inspector made inspections on the following dates during the report period
1 October 2025 to 31 March 2026:

14 October 2025

2. Routine matters

2.1. Inspections

Inspections are undertaken as part of the process for monitoring compliance with:

- The conditions attached by ONR to the nuclear site licence granted under the Nuclear Installations Act 1965 (NIA65) (as amended);
- The Energy Act 2013;
- The Health and Safety at Work etc Act 1974 (HSWA74); and
- Regulations made under HSWA74, for example, the Ionising Radiations Regulations 2017 (IRR17) and the Management of Health and Safety at Work Regulations 1999 (MHSWR99).

The inspections entail monitoring the licensee's actions on the site in relation to incidents, operations, maintenance, projects, modifications, safety case changes and any other matters that may affect safety. The licensee is required to make and implement adequate arrangements under the conditions attached to the licence in order to ensure legal compliance. Inspections seek to judge both the adequacy of these arrangements and their implementation.

In this period, routine inspections of Trawsfynydd covered the following:

- Examination, maintenance, inspection and testing

Members of the public who would like further information on our inspection activities during the reporting period can view site inspection records on our website: www.onr.org.uk/publications/regulatory-reports/site-specific-reports/inspection-records.

Should you have any queries regarding our inspection activities, please email contact@onr.gov.uk.

A follow-up targeted ONR engagement was also held in the reporting period with the Trawsfynydd Safe Store Height Reduction project team following the decision to appoint the Principal Contractor (PC). The purpose of the engagement was to understand the process the dutyholder undertook in making its decision and to gain assurance that appropriate scrutiny has been applied in the selection process.

2.2. Other work

Throughout this reporting period, our nominated site safety inspector has held regular telephone meetings with Trawsfynydd leadership team representatives to maintain situational awareness of matters related to nuclear safety.

Other routine matters discussed during this period included:

- Decommissioning progress on the site; and
- Recent site safety matters.

3. Non-routine matters

Licensees are required to have arrangements to respond to non-routine matters and events. Our inspectors judge the adequacy of the licensee's response, including actions taken to implement any necessary improvements.

There were no such matters or events of significance during the period.

4. Regulatory activity

We may issue formal documents to ensure compliance with regulatory requirements. Under nuclear site licence conditions, we issue regulatory documents, which either permit an activity or require some form of action to be taken. These are usually collectively termed licence instruments but can take other forms. In addition, inspectors may take a range of enforcement actions, to include issuing an enforcement notice.

- No licence instruments, enforcement notices or enforcement letters were issued during this period.
